Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Your task is to create a program to manage a playlist of items. Each item is represented as a character, and you need to implement the following operations on the playlist.

Here are the main functionalities of the program:

Insert Item: The program should allow users to add items to the front and end of the playlist. Items are represented as characters. Display Playlist: The program should display the playlist containing the items that were added.

To implement this program, a doubly linked list data structure should be used, where each node contains an item character.

Input Format

The input consists of a sequence of space-separated characters, representing the items to be inserted into the doubly linked list.

The input is terminated by entering - (hyphen).

Output Format

The first line of output prints "Forward Playlist: " followed by the linked list after inserting the items at the end.

The second line prints "Backward Playlist: " followed by the linked list after inserting the items at the front.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: a b c -

Output: Forward Playlist: a b c

Backward Playlist: c b a

Answer

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
struct Node {  
    char item;  
    struct Node* next;  
    struct Node* prev;  
};
```

```
// You are using GCC
```

```
void insertAtEnd(struct Node** head, char item) {  
    struct Node* Newnode=(struct Node*)malloc(sizeof(struct Node));  
    Newnode->item=item;  
    Newnode->next=NULL;  
    if(*head==NULL){  
        Newnode->prev=NULL;  
        *head=Newnode;  
        return;  
    }  
}
```

```

    struct Node*tail=*head;
    while(tail->next!=NULL){
        tail=tail->next;
    }
    tail->next=Newnode;
    Newnode->prev=tail;
}
void displayForward(struct Node* head) {
    //type your code here
    struct Node*Position=head;
    int c=0;
    while(Position!=NULL){
        printf("%c ",Position->item);
        Position=Position->next;
        c++;
    }
    printf("\n");
}

```

```

void displayBackward(struct Node* tail) {
    struct Node*current=tail;
    while(current!=NULL){
        printf("%c ",current->item);
        current=current->prev;
    }
    printf("\n");
}

```

```

void freePlaylist(struct Node* head) {
    //type your code here
    struct Node*position=head;
    while(position!=NULL){
        struct Node*next=position->next;
        free(position);
        position=next;
    }
}

```

```

int main() {
    struct Node* playlist = NULL;
    char item;

    while (1) {

```

```
scanf(" %c", &item);
if (item == '-') {
    break;
}
insertAtEnd(&playlist, item);
}

struct Node* tail = playlist;
while (tail->next != NULL) {
    tail = tail->next;
}

printf("Forward Playlist: ");
displayForward(playlist);

printf("Backward Playlist: ");
displayBackward(tail);

freePlaylist(playlist);

return 0;
}
```

Status : Correct
